ROD S

Direct flow reverse osmosis system

Although supply water is drinkable, it is not always able to satisfy the needs of the citizen for his consumption as food. Too calcareous, rich in salts, with unpleasant tastes and smells, too much chlorine, cloudy and so on...water can be improved with the filtration system ROD S, which is based on the principle of reverse osmosis, a membrane filtration which is able to remove unwanted substances from water, improving it in taste and saline composition.

The content of dissolved elements can be reduced to percentage adjustable through the mixing valve.

Direct flow does not require the presence of a water storage tank, this means greater hygiene guarantees and very small overall dimensions. This system can be placed under the kitchen plinth.

ROD S is made in Italy with high quality materials and components

TECHNICAL FEATURES

Water delivery capacity	l/h 90
Space requirements	48x42x10 cm (H x p x L)
Maintenance	Annual
Power supply	220V, 50 Hz
Absorption	180 W
Recovery*	40%
Salinity reduction	Up to 90% (adjustable)
In compliance with the	decree DM 25/2012
Installation according to	DL 37/08
Pump	180W Motor – 300 l/h brass pump

*permeated water/feedwater

Wholesaler

MADE IN ITALY
