

# WATER PRO AG

Models AG3 - AG11 - AG32

The ideal solution for water filtration

Pre-coat technology

0,5 micron filtration degree

Silver ions with bacteriostatic  
action

Removes smell, taste and  
chlorine compounds

Everpure compatible  
bayonet head plug

# WATER PRO AG

Models AG3 - AG11 - AG32

Filters for drinking water treatment with pre-coat technology, a 0,5 micron fine membrane with a layer of high quality activated carbon. The presence of Ag+ ions make the filters bacteriostatic.

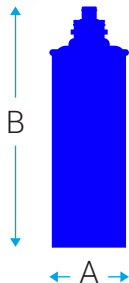

The pre-coat technology is useful when water is so turbid to clog an average carbon block. The large filtration surface of AG filters, equals to about 6 times the one of an extruded carbon block, makes a great water filtration autonomy possible, without significant pressure drops.

WaterPro AG has geometries and connections compatible with Everpure filters and must be installed vertically.

The WaterPro AG filter are made in Italy with high quality components and are certified and in accordance with with Dm 174, putting into effect 98/83/CE and 98/34/CE european directives

## TECHNICAL FEATURES

| Technical Data           | AG3    | AG11   | AG32   |
|--------------------------|--------|--------|--------|
| A Dimension (mm)         | 79     | 79     | 79     |
| B Dimension (mm)         | 260    | 375    | 525    |
| Flow rate (L/min)        | 3      | 5      | 7      |
| Filtering capacity (L)   | 3.000  | 11.000 | 32.000 |
| Working pressure (bar)   | 1 - 7  |        |        |
| Working temperature (°C) | 2 - 40 |        |        |
